An uneven series

Synthetic source review. [1]

Recorded balances cross zero [1]

Net balance in units. [1]

Three observations; no forecast or causal effect was established. [1][2]

Sources

1. **Net balance training log** · Synthetic series table
   “Synthetic net balances in units were -8 in 2021, 4 in 2022, and 12 in 2024. The year intervals are one year then two years. The records do not identify what caused the changes.”
2. **Series interpretation note** · Synthetic scope note
   “The three observations are not a forecast. A straight segment between recorded values does not establish an intermediate observation or a constant annual rate.”
