Results that disagree

Synthetic source review. [1]

The reported changes come from different settings [1][2]

Record	Setting	Reported change
Study A	Supervised laboratory [1]	12% [1]
Study B	Field use [2]	3% [2]

The records do not isolate the difference or support a pooled estimate. [3]

Sources

1. **Training study A** · Synthetic study A results
   “In synthetic study A, the reported change was 12% in a supervised laboratory setting. It did not evaluate field use.”
2. **Training study B** · Synthetic study B results
   “In synthetic study B, the reported change was 3% during field use. It did not use the laboratory supervision from study A.”
3. **Comparison constraints** · Synthetic synthesis note
   “The two studies used different settings. Their records do not isolate the reason for the difference. They do not support a pooled estimate or a declaration that one method is better.”
