Checking an application

Synthetic source review. [1]

Collection precedes the completeness check [1]

1

Collect:

retain the application. [1]

2

Check:

determine whether required information is complete. [1]

The check leads to alternative actions; both outcomes are not consecutive steps. [1]

Sources

1. **Application handling procedure** · Synthetic training procedure
   “First collect the application, then check whether required information is complete. If it is complete, begin analysis. If it is incomplete, request missing information. These are conditional alternatives, not consecutiv…”
2. **Procedure boundaries** · Synthetic procedure note
   “The procedure does not specify completion times, acceptance rates, or who is responsible. Requesting missing information does not itself mean the application is rejected.”
